Step 3: probably like 40-ish, given that everyone is required to write an intro. anyone who doesn't will be dropped, so let's say -10 (unlikely, but ig not that outrageous? normally around like 5-7). there i am also really late to this... didn't get to do this experiment very well because i straight up didn't get the chance this week.

so after manually counting all the messages in each channel, i would have gotten 40 notifs? so i guess my guess of 30 wasn't bad.. just not enough of a good reasoning to adjust my guess.

Step 6:

Break it: well for the message deletion, i don't really know what to record. i just commented "cowabunga", then deleted the message... the notifications probably unsent for everyone else. again, i'm also really late.

Yeah not really much else to record how this would look

Reflection 1: Well Alma and Jacinto briefly wrote their career aspirations/what they're currently working as in their intro, I didn't at all. Probably should have put that in, as it's kinda more interesting for people to know. It also lets people

Reflection 2: Changed my notifications to @mentions and stuff. Basically what I do on Discord.

Reflection 3: Rewrite 'my lab is broken can someone help':

Module 1 Lab 1, Reflection 3.
Trying to get a working lab.
Command: module1.lab01.run_lab(reflection_3)
Error: ArgumentError: either too many arguments or too little arguments
Already tried: checked references and made sure I had one argument
Question: Maybe there is something wrong with the software? Not properly saving my changes?

P.s. – (im not good at faking errors, just reminded me of this one time i was using vs code community and my code wasn’t working literally because of the software itself, had to restart and it started working.)
